

Features:

- Ultra-thin dual core heating element will not raise the floor levels
- Rapid Installation - cuts installation time by up to 50% depending on size and shape of the room
- Installation flexibility of loose wire with the speed of a mat system
- Great for heating under floating floors such as laminate and hardwood

The Prowire system is the fastest way to lay the Warmup loose wire system. The ultra-adhesive double-sided tape provides an excellent bond eliminating the need for primer. This reduces the installation time by 50%, saving time and money.

The ProWire installation method consists mainly of two tapes. A double-sided highly adhesive tape and a fibre glass mesh tape. The adhesive tape is put across the section of area where the cable is laid. This tape holds the wire during installation.

Because it is double-sided and highly adhesive, installers do not need to use primer. The mesh tape is placed on top of the double-sided tape after the wire has been laid, securely fixing the wire for full contact with the subfloor. This ensures that the cable does not detach with mechanical impact or during the application of wet tile adhesive.

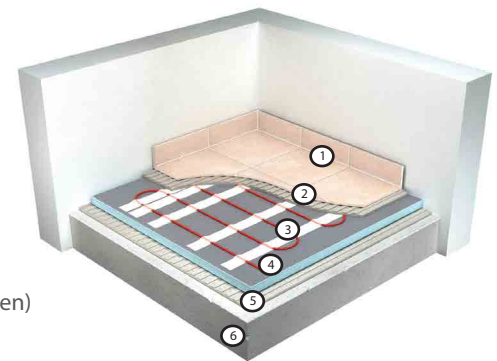

Technical data:

- Inner/Outer Insulation: ECTFE (Advanced Fluoropolymer)
- Cable Thickness: Ultra-thin 2mm
- Operating voltage: 220-240V, 50Hz
- Output rating: 150W/m²
- IP Rating : IPX7
- Heating Cable Spacing min : 70mm
- Cold Lead Length: 3m
- European Compliant and CE marked
- Approvals: BEAB component approval
- Lifetime Warranty & SafetyNet™ Installation Guarantee

PROWIRE 150W/m² SIZE GUIDE

AREA TO BE HEATED (m ²)	HEATER MODEL	WATTAGE (W)	AMPS	RESISTANCE (OHMS)
2	Prowire 2	300	1.30	176.38
3	Prowire 3	450	1.96	117.56
4	Prowire 4	600	2.61	88.17
5	Prowire 5	750	3.26	70.53
6	Prowire 6	900	3.91	58.78
10	Prowire 10	1500	6.52	35.27
